

## The U.S. Department of Defense uses the Enviance System to manage and track compliance requirements.

### The Challenge

The United States military, recognized as the steward of the nation's environment, takes pride in its efforts to remain in compliance. With so many installations it is difficult to track the thousands of requirements and tasks that need to be completed each regulatory period. Therefore, a number of U.S. military bases were looking for a way to efficiently manage a broad range of compliance activities.

### The Solution

Only the Enviance System was able to meet their complex set of requirements.

### The Benefits

- Simplified & consistent processes
- Compliance assurance
- Complete accountability
- Efficiency & time savings
- Centralized data

Because of the scale of the military's requirements, they needed a solution that was much more comprehensive than checklists and spreadsheets, many of which were manually maintained. By using the Enviance System as their compliance solution, the Department of Defense (DoD) agencies are making significant strides towards the complete management of their environmental requirements in one, easy-to-access system.

The Enviance System provides the tools necessary to manage:

- Task Completion
- Inspections
- Equipment maintenance
- Reporting

### Enviance offers unlimited, seamless scalability

Enviance offers the market's only compliance management solution utilizing the Software as a Service (SaaS) model, which provides the flexibility to scale the solution as needs change over time. This supports unlimited scalability, which allows an installation to seamlessly grow from a few users to hundreds of users. No longer are personnel changes, whether from civilian turnover or military deployment, an impediment to managing compliance requirements. Enviance allows installations and facilities to centrally manage and automate all aspects of compliance from a web browser, significantly improving compliance obligations by eliminating the need for paper trails.

### Each installation can map to its unique requirements

The flexibility that the Enviance System offers allows each installation to easily automate their unique processes and requirements. This allows the DoD to develop different solutions for each installation while maintaining the ability to roll up data across installations – without extensive staffing requirements or the support of an internal IT department.

### Enviance helps each installation reach its performance improvement goal

Each of the installations continuously aims to improve performance, and the Enviance System supports this initiative by:

- Increasing efficiency by automating manual processes
- Streamlining data capture
- Centralizing data storage

- Ensuring compliance through alarms, alerts, reminders, and tracking
- Creating transparency in the compliance process
- Enabling fast deployment and quick ramp up

### Some of the installations using the Enviance System include:

- Ft. Carson, CO
- West Virginia National Guard
- Ft. Benning, GA
- Anniston Army Depot, AL
- California National Guard
- Ft. Detrick, MD
- Hawaii National Guard

### The U.S. Military uses Enviance for a broad range of compliance solutions:

- Internal Compliance Assessment System (ICAS)
- NEPA
- Water Programs
- Management reporting
- Document and Task Repository
- Air Emissions Inventory Planning
- Air HAPS and TRI Calculations
- GIS Integration
- ISO 14001 based EMS
- EMS Model Development
- Employee Training
- Compliance Calendar
- Inspection Checklists
- Inspection Findings and Corrective Action Resolution Process
- Discrete Compliance Modeling
