

Sustainability Simplified.

Corporate Social Responsibility (CSR) and sustainability initiatives are becoming increasingly important for organizations worldwide. As your operations expand or become more complex, it is important to efficiently manage and report on the wide range of disparate data that your executives want included in your annual reports.

Being identified as an organization committed to a sustainable future pays big dividends – in public perception, global stewardship and in operational efficiencies achieved. Employing methods of production and distribution that reduce energy consumption and emissions, prevent or reuse waste products, and minimize the overuse of natural resources is not just the right thing to do – it is a competitive advantage.

Benefitting every level of your organization

Enviance is the leading on-demand Internet-based EHS data management provider. Our System helps leading global organizations track, analyze, and report CSR and Sustainability metrics and key performance indicators (KPI's), enabling the effective management of:

CORPORATE STRATEGY

- ▶ Protect & Enhance Brand
- ▶ Increase Market Valuation
- ▶ Improve Financial Performance

BUSINESS OPERATIONS

- ▶ Achieve Reduction Targets
- ▶ Improve Accuracy & Timeliness of Reporting
- ▶ Standardize Metrics across Business Units

LOCAL PRODUCTION/DISTRIBUTION

- ▶ Reduce Expenses for Sustainability Management
- ▶ Improve Quality of Reporting
- ▶ Reduce Exceptions & Violations

The Enviance System helps you manage a large body of disparate EHS data – air, greenhouse gases, water, waste, health, safety and more – so your annual Corporate Social Responsibility (CSR) and Sustainability reports are completed with ease and accuracy.

From data entry to reporting, Enviance enables you to submit balanced, comparable, and accurate information that you can reliably submit in a timely manner. Whether you are preparing Annual Corporate EH&S, Sustainability or Benchmarking Reports, Enviance offers sustainability *simplified*.

Sustainability Data at your Fingertips

The Enviance System is a complete solution for sustainability data management – with endless reporting capabilities. Types of data that can be used in your CSR and Sustainability Reports:

- ▶ Total metric tons of carbon emissions
- ▶ Percent of energy purchased from renewable sources
- ▶ Energy saved due to conservation and efficiency improvements
- ▶ NO_x, SO_x and other air emissions by type and weight
- ▶ Waste reuse and recycling
- ▶ Water consumption and conservation

As an example, Syngenta and American Electric Power have taken a proactive approach to their role in the global economy, fulfilling their compliance obligations in order to promote a more responsible approach to their business activities.

Syngenta uses Enviance for sustainability

As one of the world's leading agribusinesses, Syngenta is committed to responsibly managing all aspects of environmental compliance and sustainability.

Syngenta upgraded its small-scale system that ran basic reports to a more comprehensive compliance and sustainability management system that better met their ever growing needs – simply. End users now have a faster system and Syngenta is able to manage multiple compliance programs in one database.

Enviance's software as a service (SaaS) platform centrally and securely manages Syngenta's sustainability data in a standardized format. Using the Enviance System to manage corporate responsibility and sustainability data – including information for shareholder and public reports as well as the Dow Jones Sustainability Index (DJSI), Syngenta is going beyond compliance and addressing climate change head on with accurate, consistent and verifiable data.

Enviance is the technology foundation for American Electric Power (AEP)

Owning and operating tens of thousands of megawatts of generation capacity in the United States, AEP is the largest electricity generator and one of the largest electric utilities in the U.S. They have long recognized their unique responsibility with respect to environmental protection.

AEP participates in multiple voluntary greenhouse gas (GHG) reduction programs in addition to their state and federal environmental commitments. The company needed one system to consolidate all of the GHG data and generate reports across a wide range of requirements. With Enviance, AEP now has a solution that helps build on its strong environmental track record while protecting institutional knowledge – all without taxing IT resources.

Be a part of the solution

Being committed to a sustainable future means more than simply capturing EH&S data. It also includes engaging in – and tracking and reporting – product-supply chain stewardship, community activities, human rights efforts, positive labor practices and economic measures.

All of your sustainability metrics can be tracked in the Enviance System – simply.
