

## Take the guesswork out of greenhouse gas management

Many governments are taking steps to reduce Greenhouse Gas (GHG) emissions through national policies that include the introduction of trading and reporting programs, carbon or energy taxes, and regulations and standards in energy efficiency and emissions.

Because you can no longer “wait and see” what will happen with GHG emissions, you need to establish a standardized emissions inventory that is relevant, complete, consistent, transparent, and accurate – and that withstands rigorous third-party auditing and verification.

As the foundation for your GHG management program, Enviance provides an Internet-based system that calculates, stores, and reports emissions inventory data in multiple standardized and non-standardized formats. And, the Enviance System is scalable and flexible to serve the diverse needs of your organization.

### One System for all your GHG emissions inventory needs

Organizations around the globe in nearly every industry have started accounting for and quantifying their GHG emissions inventory. To gain or maintain competitive advantage in a carbon constrained business environment, you need to:

- ▶ Manage GHG risks and identify reduction opportunities
- ▶ Participate in voluntary GHG programs and report to the public
- ▶ Comply with mandatory reporting programs
- ▶ Position your organization for trading in GHG markets
- ▶ Seek recognition from governments, the public, and the financial community for early and voluntary action

To effectively satisfy these needs, you require an auditable and verifiable system to manage your GHG emissions inventory data. Enviance provides a central, Internet-based data repository for the many GHG standards and protocols for reporting emissions across a wide range of programs:

- ▶ Voluntary GHG reduction programs
- ▶ GHG registries
- ▶ National and regional industry initiatives
- ▶ GHG trading programs
- ▶ Sector-specific protocols developed by a number of industry associations

With Enviance, you are using one information system across the entire organization – providing you with an unprecedented level of relevance, completeness, consistency, transparency, and accuracy for your GHG emissions inventory. And, because the Enviance System is available today with the tools and templates you need to manage GHG emissions, you can rapidly deploy your GHG emissions inventory system.

### Accurate and complete data

Today, most companies generate high-level estimates of their GHG emissions. Enviance enables standardized GHG emissions accounting and quantification methodologies that allow accurate and complete emissions inventory across the entire organization. Without a comprehensive system like Enviance, it would be virtually impossible to track such large amounts of information.

If your organization has data historians like emissions and fuel loading databases, Enviance allows you to link to these established systems – to support the sheer amount of data required for GHG management.

Enviance provides you with the tools and flexibility needed to manage GHG emissions:

- ▶ Centralized database to enter, consolidate, and store GHG data
- ▶ Robust, powerful emissions calculator to derive GHG emissions
- ▶ Organizational entity hierarchy and reporting to accommodate your unique business needs
- ▶ Anytime, anywhere access to GHG emissions data and reports
- ▶ Easy benchmarking including progress towards reduction goals
- ▶ Standardized reporting for multiple programs, regulations, and organizations

### Consistency and transparency across the organization

Your GHG management system must easily deploy around the world and provide seamless communication. In terms of technology, the Internet is the only platform that provides the flexibility, scale, and ease of deployment suited to meet this demanding measurement challenge. Having your data in one centrally managed, Internet-based database gives you an easily accessible view of your entire GHG emissions inventory program.

Enviance also provides embedded task management and calendaring functions which result in ‘end-to-end’ organizational accountability for the monitoring, reporting, and analysis of GHG emissions.

### Scalable and flexible to accommodate current and future needs

Enviance is proven as an enterprise-wide emissions inventory data management system by thousands of users in the most demanding Fortune 1000 companies and government organizations with customers managing multiple business entities and facilities in one system. Enviance easily accommodates the addition and subtraction of business entities as your business changes over time.

You can also use the Enviance System – and even the same data for your GHG emissions inventory – to monitor and track compliance with other programs such as the Clean Air Act and Toxics Release Inventory (TRI) reporting.

### Why continue to estimate GHG emissions when you don't have to?

There's simply no more complete tool to manage your GHG emissions – and all your other health, safety, air, water, and waste compliance programs – than Enviance.
